

NEW OROPERU RESOURCES INC.

October 25, 2007

TSX.V: ORO

NEWS RELEASE

DEFINITION DRILLING AT TRES CRUCES CONTINUES TO EXPAND MINERAL RESOURCES

White Rock, B.C.- New Oroperu Resources Inc. (TSX Venture: ORO) (“New Oroperu” or the “Company”) is pleased to update the status of drilling on its Tres Cruces Project in North Central Peru by Minera Barrick Misquichilca S.A., “Barrick”.

There have been two campaigns of diamond drilling reported this year. The results of a 5,508 meter diamond drill program were announced in the Company’s June 18, 2007 News Release, which expanded the area of prior known mineralization. On August 8, 2007 the Company released results of a 5,776 meter diamond drill program. This program encountered better grades and also extended mineralization beyond the historical resources.

The success of these drilling programs has led to the need for additional drilling.

The current reverse circulation drill program was designed to continue the in-fill and delineation work. This program started in mid-July and was planned for about 7,300 meters in 40 holes. This phase of drilling has already drilled over 40 holes and is still in progress and may continue until the end of this year.

At the moment, drill results on this on-going program have not been received by the Company. Also, assay results for 2,600 meters in 13 holes drilled for geotechnical purposes are still pending. The Company will report on these results when received from Barrick, after their final review of the Quality Assurance and Quality Control (QA/QC) Program.

To summarize:

Barrick has drilled 11,284 meters of diamond drilling in addition to the over 36,000 meters drilled in previous years. Geotechnical drilling has been completed with 20 holes in 3,925 meters.

The current reverse circulation infill and delineation drill program is still in progress with over 40 holes and over 7,000 meters drilled.

An IP geophysical program is currently in progress and additional drilling is planned following completion of this survey. An environmental baseline study is also underway. An updated resource calculation by Barrick is planned, subject to completion of in-fill drilling and evaluation of the geotechnical drilling.

The Tres Cruces project is a 100% company-owned project subject to a 1½ % NSR royalty and subject to an option agreement with Barrick. Under the terms of the agreement, in order to exercise the option Barrick must pay for all expenditures up to a production decision. The Company retains a 30% interest. The Company's share of production costs are financed by Barrick. Additionally the Company retains a 2% NSR royalty of which US\$1,000,000 is to be paid in advance at the time of a production decision. To maintain the option Barrick must pay US\$250,000 to the Company on May 31st each year until a production decision is made. Barrick has made the most recent payment.

Prior to this current Barrick work, the Company had reported a measured and indicated resource of 34.5 million tonnes grading 1.59 g/t., about 1,700,000 oz. gold. These historical resources were calculated and reported to the Company by Battle Mountain Gold in 1999. To prepare an independent technical report the Company's qualified person reviewed the data and interviewed the Battle Mountain personnel responsible for the calculation and determined that it was according to industry standards at the time. The details are in the Company's NI 43-101 report "Summary Report of the Tres Cruces Property dated July 25 2002" and filed on SEDAR, www.sedar.com on July 31 2002. These resources are determined to be historical with respect to the implementation of NI 43-101 and as such are deemed not NI 43-101 compliant and are not to be relied on.

The Company is pleased with the progress on the Tres Cruces property. It appears that the in-fill drilling and delineation of the limits of mineralization could continue to year end. It is apparent that the close proximity of Tres Cruces to Barrick's Lagunas Norte operations is enhancing the evaluation and development of the Company's 100% owned Tres Cruces project.

"This is an exciting time for the Company and we look forward to the continued evaluation and the updated resource calculation in the short term," stated New Oroperu president Wayne Livingstone.

ON BEHALF OF THE BOARD OF DIRECTORS

"K. Wayne Livingstone"

K. Wayne Livingstone
President
